Abstract (en)
[origin: WO2008019703A1] The present invention relates to a sole structure for a shoe, comprising a sole body (2) containing a cavity (4, 8), which extends along the sole body and is closed by an elastically deformable covering (10), which has openings (14, 15, 16), and in which the cavity is in connection with the outside of the sole body facing the shoe through the openings and in which the cavity is in connection with one or more first transverse passages (5), which open out into openings in the lateral and/or rear surface (6) of the sole body, so that the cavity is brought into connection with the exterior of the sole body.
