Abstract (en)

[origin: WO2008023053A2] To produce coloured sintered ceramic bodies, in particular for dental applications, it is known that coloured layers can be applied to the ceramic bodies in a separate process or a porous surface layer of the ceramic body can be impregnated with a liquid preparation of the material to be coloured and after-treated. This is a complicated process. It is therefore proposed according to the invention that the colouring materials be added dry in powder form to the material of the base composition of the ceramic body to be produced and be homogeneously mixed with this dry.
