Abstract (en)
[origin: WO2008028303A1] In order firstly to make a high speed possible but also to avoid high peak values of the weft thread tension in the process in a needle loom having a weft-thread compensation device (22) which tensions the weft thread (4), it is proposed to configure the weft-thread compensation device (22) as an air stream device and, furthermore, to use a spring device (12) for measuring and/or for limiting the weft thread tension.
