Abstract (en)
[origin: WO2008025379A1] A refrigerator has a water tank (8) which has an inlet connection (16) and an outlet connection (17), which is connected to a water dispenser (5), and is divided by at least one first lamella (24), which is arranged in the interior of said tank, into sections (38) through which the tank contents successively flow on the way from the inlet connection (16) to the outlet connection (17). The sections (38) merge with one another at a free edge (37) of the lamella (24). The lamella (24) is provided with a passage opening (39) which is at a distance from the free edge (37) and connects the sections (38) and whose free cross section is smaller than the free cross section of the sections (38).
