Abstract (en)

[origin: US2009024928A1] The invention relates to a system for processing electronic data which is transmitted from a host computer to a client computer which converts the electronic data into a target format which differs from the format in which the data was received at the host computer. With the system, stock market-relevant information is to be made accessible, intuitive, and quickly grasped by market laypersons and promotes risk-free and motivating learning of the market's ground rules and an understanding of their complex mechanisms within the stock exchange. The system includes modules to receive and store data on a host computer to convert the data received at the host computer by a conversion rule into an object-oriented data format, to transmit the converted data to a client computer, its display unit reproducing the transmitted data as graphical objects; and to interactively process the transmitted data on the client computer.
