Abstract (en)  
[origin: WO2008029067A2] The invention relates to a musical percussion instrument (1) of the type comprising a barrel (2) over at least one (20) of the openings (20, 21) of which there is stretched a membrane (3) in the form of a disc of appropriate material equipped with means able to collaborate with complementary means with which the barrel (2) or a support (22) thereof is equipped, and intended to allow the membrane (3) to be attached to the barrel (2) with the application of tension. This musical instrument is characterized in that said means with which the membrane (3) is equipped are defined by a series of holes (30) uniformly distributed at the periphery of said disc and through which a series of ties are intended to be anchored, at least part of the ties being capable of being secured to an element that forms an integral part of the barrel (2) or of a support (22) thereof.
