Abstract (en)
A button whose button body is prevented from tilting obliquely even when it is attached to clothes mechanically and which can be attached firmly to clothes. The button includes a button body 11, and a leg portion 12 projecting in a ring shape downward to the bottom surface of the button body 11, the leg portion 12 has a groove 17 formed therein for twining a thread 23 to be attached to clothes 2, and the groove 17 has inclined surfaces 31 formed thereon an interval between which becomes narrower toward at least a tip. This structure prevents a knot portion of the thread 23 from jumping out of the groove 17.
