Abstract (en)

[origin: EP2060374A2] Stations are linked via first (2.1), second (2.2), third (2.3) and fourth (2.4) conveyor devices. A functional station (6) incorporates porous insulating bodies on the first conveyor device to form a heat-insulating layer. First (8) and second (19) milling stations include opposing longitudinal/transverse sides (7) for a insulating body with a groove and spring. A mortar station (35) applies a layer (36) of adhesive mortar to the surface of a insulating body.
