Abstract (en)
A container according to the invention has a lid with a discharge portion and an elastically flexible bistable portion (20) that allows a discharge portion (15) of the container (1) to assume a retracted position and an advanced position, the bistable portion (20) extending around the discharge portion (15). The discharge portion includes a stopper (30) operable independent of the position of the discharge portion to selectively allow for or prevent discharge of the contents of the container through the discharge portion.
