Abstract (en)

[origin: EP2060675A2] A sheet forming method involves supplying a fluid laterally, downstream of a turbulence block (3) of the material run-up (1), through openings (9) to a fiber material suspension in the wet batch, the paper-or cardboard-machine comprising the material run- up (1) and a sieve edge limit (7). An independent claim is given for a wet batch of a fiber material web fabrication machine.
