Abstract (en)

[origin: EP2060729A2] In this sealing system, the seal (10, 11) runs continuously around the corner (8), in the rebate of the inner frame forming part of the opening window or door leaf. A rounded section is provided in the horizontal and/or vertical rebate, around which the seal wraps. This section is arranged on a transverse slide. This allows the horizontal and/or vertical seal sections (12-15) to be moved transversely to the peripheral direction of the rebate. The seal-wrapped section includes at least one groove to receive part of the seal. The groove is not undercut.
