Abstract (en)

[origin: EP2060755A2] The component (1) has a housing (2) with a slave housing (4), which is firmly adapted to a recess (3). A slave piston (6) is movably supported in a borehole (5) of the housing. The housing is radially directed through a wall of the recess, and includes a front side (18) with a sealing surface, where the front side is turned towards a base (19) of the recess. A gap compensating element is arranged in a voltage stream between the front side and the base, where the element has a preset axial deformability for achieving complete sealing effect of the sealing surface.
