Abstract (en)

[origin: EP2060773A2] The fuel supply unit has multiple components that are flanges for closing an opening of a fuel tank. The components through which fuel flows are connected with an earth potential (24) by two electrically conducting connections (25,25a,26,29,30). An electrically conductive plastic is a polyoxymethylene or a polyamide with addition of electrically conductive components, particularly metal or carbon.
