Abstract (en)

[origin: EP2060868A2] The detonation chain (8) includes a second detonator (14). The barrier (16), when in a safety position, blocks the intermediate space between the two detonators (10, 14). The detonation chain can be brought into a live state, by moving the barrier to open the intermediate space. When the barrier is moved, the two detonators remain stationary with respect to each other. The first safety device (24) is unlocked mechanically. An electronic controller causes the second safety device (26) to unlock.
