Abstract (en)
The present invention concerns an automatic vending machine (1) comprising a frame (2) defining internally a volume for housing the internal components necessary for operation of the said vending machine (1) and supporting a first part of said internal components, in which there is an internal frame (4) able to support most of the internal components movably with respect to the frame (2), the internal frame (4) being itself movable with respect to the frame (2), between a first retracted position and a second working position.
