Abstract (en)

[origin: WO2008022790A2] The invention relates to a method and a device for processing plastic-containing and organic fluids based on crude oil, cooking oil, fats or the like, wherein the substance mixture is fed into a reactor, is then melted in the melting zone of the reactor and the interfering substances are discharged from the melt. The long-chained polymers still present in the melt are cracked in a crack zone of the reactor until they assume a gaseous state. Then the gas phase is discharged from the reactor and condensed in a cooler. Impurities are then removed from the volatile liquid present after cooling and the volatile liquid is stored.
