Abstract (en)
[origin: EP2062621A1] The racquet has a head region for receiving a string defining a string plane, a handle section and a core region, where the handle section is provided for holding the racquet. The core region includes two arms (5, 6) and a V-shaped or U-shaped backbend (7). The backbend is mounted at both the arms in a rotatable and/or pivotable manner with respect to an axis running perpendicular to the string plane. The backbend includes two brackets, which are movably mounted at the arms and are connected with each other in a center by a joint. An independent claim is also included for a method for producing a racquet.
