Abstract (en)

[origin: EP2062690A1] The attachment has a holding device (6) for fixing a screw head (16) at a screw head retainer (12) in a feed direction (5). A rotary drive movement of a machine screw device is transmitted to the screw head by the retainer. The retainer and the holding device are movable relative to each other in a contact position in the feed direction of a screw-in process for releasing the holding device. The screw head adjacent to the retainer is attached to the workpiece in an unhindered manner in the contact position.
