Abstract (en)  
The device has upper units (212.1, 212.3) and lower units (212.2, 212.4) provided with a set of rolls (270), where the rolls run in restricted guidance around static cores. The rolls are connected with each other and to a circulating endless belt by a connection device. The upper and lower units are arranged above each other. A chain partially encloses an outer periphery defined by the rolls, which are connected with each other. The chain is covered with an elastic belt e.g. toothed belt, which includes plastic or rubbery-elastic material.

Abstract (de)  
Die Erfindung betrifft eine Vorrichtung zum Wechseln einer Bespannung einer Papiermaschine. Die Erfindung ist dadurch gekennzeichnet, dass die Vorrichtung wenigstens eine Einheit mit einer Vielzahl von Rollen (310) umfasst, wobei die Rollen (310) um einen statischen Kern (325.1,325.2) umlaufen.
