Abstract (en)
A prefabricated wall element comprises a first insulation layer (200) and a second insulation layer (300) arranged on the first insulation layer (200). The second insulation layer forms channels for allowing the molding of a load bearing concrete structure. A third insulation layer (400) is arranged such that it covers the second insulation layer (300) and the load bearing concrete structure and a concrete layer (500) covers the third insulation layer (400). A skeleton (100) including beams (110, 120, 130) having a first side adapted for fastening of boards and a second side faces the first insulation layer (200).
