Abstract (en)  
A collar system (50) for being rotatably mounted upon a shaft and thus enabling tensioning of springs (57) mounted upon rotatable shafts. The collar system (50) comprises a secondary attachment portion (54) adapted for mechanical connection to one end of said spring (57) mounted upon said shaft; a primary attachment portion (51) on said collar (50) having longitudinally (C) extending splines (52) formed on the outer periphery of said primary attachment portion (51); and said primary attachment portion (51) is provided with at least one groove (53) propagating transverse (D) to said splines (52). It is also disclosed a method for adjusting tension in springs (57) mounted upon rotatable shafts and a wrench assembly (1) suitable for performing the method.
