Abstract (en)  
[origin: EP2063214A1] The device has three synthetic fabric layers (31-33) forming reinforcements of a single piece obtained by transfer molding of phenolic resin, where the device is constituted by 30 percentages of the resin and 70 percentages of fabrics. The layer (32) includes a fabric with glass fibers crossed with carbon fibers. The fabric of the layer (33) includes a mesh that is fine than that of the layers (31, 32), where each layer includes a stack of fabric layers. The layer (33) includes thickness that is half of thickness of the layer (32).
