Abstract (en)  
A dispensing machine for cigarette packs in accordance with one embodiment of the invention includes a housing containing a plurality of supply channels. Each supply channel is configured to hold a plurality of cigarette packs arranged in a line. Each supply channel comprises a biasing device operable to urge the cigarette packs in the line towards a delivery position; a slot located above the delivery position; a delivery button; and a dispensing mechanism that is operable to dispense a cigarette pack from the delivery position upwards through the slot in response to actuation of the delivery button.
