Abstract (en)

An on-wall information socket with an openable lid (36), of which the main improvement is to form the lid (36) encircling a hole (31) on a top surface (331) of an upper cover (30); the lid (36) has a pivot portion (361) pivotally connecting with the upper cover (30), and can be opened by pivoting about the pivot portion (361) before a bolt (34) is locked onto a stud (23) on a lower base (20). With this structure, it can be more convenient to assemble and maintain as well as repair the cables (50) embedded in the wall.
