Abstract (en)

[origin: WO2008031981A2] This method comprises a step of heating a mass (16) forming a braze. In accordance with the invention, before the heating step, the method includes steps of arranging the mass (16) and the member (12) on the support (14). In particular, it includes a step of positioning the mass (16) on the support (14) and a step of applying a first compressive force (F1) on the mass (16) so as to compress said mass (16) against the support (14), the intensity of the first force (F1) increasing up to a predetermined first value chosen so as to flatten the mass (16). Next, the method includes a step of positioning the member (12) on the flattened mass (16) and a step of applying a second compressive force (F2) to the member (12) so as to compress said member (12) against the flattened mass (16) and the support (14), the intensity of the second force (F2) increasing up to a second predefined value, the second predefined value being lower than the first predefined value.
