Abstract (en)

[origin: WO2008028710A1] The invention relates to a window wiper system with a window wiper drive (1), in particular for rear window wipers of a motor vehicle, with a gear housing (10), which can be closed by means of a housing cover (14), for accommodating a gear arrangement (11), wherein the gear housing (10) and the housing cover (14) each have a run-on surface (15a, 15b) for the axial guidance of the gear arrangement (11). When the housing cover (14) is closed, an intermediate space (16) is formed between the mutually opposite run-on surfaces (15a, 15b), said intermediate space corresponding to the geometrical dimensions of an installation region of the gear arrangement (11) to be inserted.
