Abstract (en)
[origin: WO2008028848A1] Motor vehicle braking installation comprising a master cylinder (10) operated by a brake pedal and connected to a brake fluid reservoir (30) and to feed circuits (26, 28) supplying the wheel brakes, characterized in that the brake fluid reservoir (30) is mounted on the master cylinder and is connected to the master cylinder (10) by connecting means (32, 34) involving electrically operated valves (36, 38) which valves are closed in the rest position and are made to open by a computer (C) on the basis of an output signal from a position sensor or displacement transducer (40) associated with the brake pedal or with the said element moved by this pedal.
