Abstract (en)

[origin: WO2008025875A1] The invention relates to a device in winding of a web, in particular a rewinder, comprising an unwind section, a slitter section and a windup section (10). The windup section (10) is a two-drum type winder and comprises one winding station (20). The windup section also comprises a rider roll (16) extending substantially across the entire width of the windup section.
