Abstract (en)

[origin: WO2008034739A1] The invention relates to a method for electrochemically coating or stripping the coating from components (1). In said method, the component (1) acts as an electrode and an electric field is established between the component (1) and a counter-electrode (3), said field allowing the deposition of a coating material that is dissolved in an electrolyte or the removal of a coating material (11) on the surface (2) of the component. During the deposition or removal process, the component (1) is covered with structures (5) consisting of an electrically insulating material.
