Abstract (en)
[origin: WO2008028639A2] The invention relates to a clutch comprising a connection for a driving motor at the input end, a connection for an output shaft at the output end, and a set of disks that is arranged therebetween and is brought into a frictional state by means of a piston-cylinder unit. As an essential feature, the set of disks is impinged upon by two piston-cylinder units which additively complement each other.
