Abstract (en)  
[origin: WO2008032901A1] In order to provide a cooking apparatus that has a cooling flow path extended from a rear space to a lower space of the cooking apparatus, the present invention discloses a cooking apparatus, which comprises: a cooking cavity; a rear space located behind the cooking cavity; a lower space located under the cooking cavity; a cooling flow path extended from the rear space to the lower space; an inlet of the cooling flow path provided at the rear space; and an outlet of the cooling flow path provided at the lower space. Through this configuration, a flow can sufficiently remain in the cooking apparatus, and thus the cooking apparatus can effectively be cooled down. Also, a cooking apparatus with a cooling flow path from the rear space to the lower space can be provided.
