Abstract (en)

[origin: WO2008028825A1] In the method for the relative positioning of an object to be measured in relation to a measuring device according to the invention, the object to be measured is initially detected by the measuring device, and the position of the object to be measured in relation to the measuring device is determined. Subsequently, a feedback signal is generated, which indicates whether the object to be measured is located in a position suitable for measuring, or not.
