Abstract (en)
[origin: WO2008025497A2] The subject matter relates to software application collaboration and, more particularly, collaboration between software applications via content subscriptions and updates. Some embodiments include systems, methods, and software to receive a definition of a content item from a first party that is operable within an application of a second party to cause data to be exported by the second party's application in a manner that can be imported to an application of the first party. Some other embodiments may also, or alternatively, maintain a representation of configuration settings in a database of one or more application instance configurations and receive new content linked to one or a combination of relevant configuration settings. Some embodiments also identify application instances to receive the new content that is relevant to configuration setting links of the new content and the representation of configuration settings.
