Abstract (en)

[origin: WO2008034397A1] The invention relates to a fuse switch disconnecter with at least one lower part and at least one grip insert, which can be removed from the lower part, for disconnecting or closing the fuse switch disconnecter contacts and at least one auxiliary switch, which is to be actuated mechanically, wherein the switching state of the auxiliary switch depends on the position of the grip insert in relation to the lower part. The invention provides that the auxiliary switch (3) is actuated by means of an actuating element (4), whose fastening position on the fuse switch disconnecter is variable.
