Abstract (en)

[origin: DE202006014284U1] A mobile phone has devices for measuring at least one function-relevant variable, and a data processing device for comparing the value of the function-relevant variable with at least one limiting/threshold value, and a device for generating a warning signal when the value of a function-relevant variable is less than, or exceeds, the threshold value. The mobile phone has a device for adjusting the threshold value. An independent claim is included for a monitoring system for a mobilephone.
