Abstract (en)
[origin: EP2065091A1] The device has a rotor mounted in a housing (5), and a stator cutter (3) supported at the housing, where the rotor comprises rotor cutters (2) or rotor teeth. A screening device (4) is movable downwards from an operating condition of the device or laterally into a maintenance condition relative to the housing. The stator cutter and the screening device are supported together in the operating condition and are combinedly movable from the operating condition to the maintenance condition. The screening device has a connecting unit connecting the screening device with the stator cutter.
