Abstract (en)

Wire drawing machine (10) comprising a plurality of stations (20) which starting from a first station (20) towards next stations (20) are able to reduce gradually a section of a metallic wire (90), each station (20) comprises a rotatable drum (22) on which the metallic wire is wrapped, a tool (25), in particular a die or a draw box, and pulling means connected to the rotatable drum (22) which are able to rotate the same forcing consequently the passage of the metallic wire (90) through the tool (25) in such a way to reduce the section of the metallic wire (90), the pulling means comprise an alternate current electric motor (30), in particular asynchronous or with permanent magnet. The electric motor (30) of the pulling means of the first station (20) comprises a number of poles equal or greater than 8, in particular equal or greater than 12. Besides, at least the first three stations (20) show pulling means which are provided of an electric motor (30) having a number of poles equal or greater than 12, and in particular equal or greater than 18. In other terms, none of the wire drawing stations (20) shows a belt transmission and/or a reduction gear connected to said electric motor (30).
