Abstract (en)

[origin: EP1757387A1] Metal particles approximately in the form of spheres having a mean diameter of about 40µm to about 100 µm, including magnesium silicide particles having a mean diameter of about 1 µm to about 10 µm uniformly dispersed in the metal particles, the metal particles being obtained by mixing about 90 wt.% to about 95 wt.% of magnesium and about 5 wt.% to about 10 wt.% of silicon, and the magnesium silicide particles being formed in the metal particles by the reaction of the magnesium and the silicon.
