Abstract (en)

[origin: EP2065147A1] The machine (1) has a set of positioning elements (11) and another positioning element, where the set of positioning elements (11) and a third positioning element are formed complementary to each other so that the elements are engaged with each other. The set of elements (11) is arranged at a positioning rail (10), and the latter and third elements are arranged at a carriage (4). An actuator is connected with the third element, and a relative position of the third element is changed relative to the carriage in a movement direction (A) of the carriage.
