Abstract (en)

[origin: WO2008025905A2] The present invention relates to a method and a device (1) for automatically manufacturing a magnetic closure system from a block of positive and negative magnetic members (3, 5) and from one or two flexible strips (2, 4), as well as to such a system. A dual strip (2, 4) is formed by folding the strip in two in the longitudinal direction or by attaching a strip onto another strip, small pockets (8) are formed at regular intervals in the dual strip, the magnetic members (3, 5) extracted from the bloc are inserted one by one or in batches into said pockets by pushing said members into the corresponding pockets, and the pockets can be closed or not.
