Abstract (en)
[origin: US2009236485A1] A display arrangement is provided that includes at least one profile made of one or more parts, at least one essentially horizontally oriented planar rack element and at least one bracket element, wherein each of the profiles has at least one central web and, arranged thereon, two parallel inner flanges. Wherein at least one of the profiles can be oriented vertically, wherein the bracket element is formed from a top part and a bottom part which can be drawn against one another by means of at least one tensioning screw, and each have a tensioning surface. Wherein the tensioning surfaces are essentially parallel to one another, and wherein the top part and/or the bottom part are/is provided with clamping rails and/or clamping-rail segments which can be connected in a force-fitting and releasable manner to the inner flanges by being plugged thereon, it being possible for each rack element to be fixed in a force-fitting manner between the tensioning surfaces of at least one bracket element by virtue of the tensioning screw or of the tensioning screws being tightened.
