Abstract (en)

[origin: WO2008034689A1] The invention relates to a water-conducting domestic appliance, in particular a domestic dishwasher, comprising a washing compartment and a detergent dosing system with a device for dosing and/or adding at least one detergent, in particular a liquid detergent, in or to a washing compartment of the water-conducting domestic appliance. Said device has a dosing chamber for receiving the added detergent(s) and at least one outlet, which can be opened and closed by a seal that is actuated by an actuator system. The invention is characterised in that said actuator system comprises: transmission means (23), which are operatively connected to the seal (26) so that a movement of the transmission means (23) initiates the movement of the seal; opening means (38), which initiate the movement of the transmission means (23) in a first direction in order to open the seal (26); and restoring means (39), which initiate a movement of the transmission means (23) in a second direction in order to close the seal (26).
