Abstract (en)
[origin: WO2008029034A2] The invention relates to an implantable device (1) intended for injection and/or sampling of fluids in an organism, said device (1) comprising a chamber (4), a puncture zone (2), and a means (5) provided for adapting the puncture zone (2) and designed to modify the extent of said puncture zone (2), said adapting means (5) being characterized in that it comprises a first cylindrical sleeve and a second cylindrical sleeve engaged one inside the other and moveable relative to each other, said first and second cylindrical sleeves forming superposed first and second obturator elements (12, 14), respectively, which each have one or more slots and also portions resistant to puncture (12 A, 14A), such that the relative positioning of said first and second cylindrical sleeves makes it possible to modify the extent of the puncture zone (2). Implantable sites.
