Abstract (en)
[origin: WO2006111038A2] A bulk material container (150) has a container wall that has one, two or more layers (133, 153). At least one of the layers (133, 153) has at least one part (133, 153) made from a flexible material. The bulk material container (150) also has at least one connection flange (120, 151, 152), which is provided with a bulk material opening (154) and which is made of a rigid material. The connecting flange (120, 151, 152) is removeably joined to the layer part (133, 153) of the container wall made of the flexible material by means of a joining device. The bulk material container (150) and the connecting flange (120, 151, 152) ensure a tight connection of the bulk material container (150) to a filling and/or emptying station and are inexpensive.
