Abstract (en)

[origin: WO2008026982A1] The present invention relates to a method to safely mount a building board on a bedding, so that the front surface of the boarding does not get penetrated during the time glue applied between the board and the bedding is curing or getting stiff. The invention is characterized in friction increasing means applied at the bedding in connection to its lower part, that glue is applied to the bedding, preferably in the shape of a string, that the board is fit up against the bedding and adjusted, and then a force is applied on the lower part of the boarding at the position of rearward arranged friction increasing means such that this or these means are activated and penetrate the rear surface of the board and assist in holding the whole weight of the board.
