Abstract (en)
[origin: US2008073859A1] A sealing arrangement, in particular for pipe connections to the exhaust gas system of an internal combustion engine, with a sealing support and at least one sealing element in the form of a ring element (25) that forms a mold seal, is characterized in that a holding device (27) that produces a frictional connection between sealing support and ring element (25) is provided to secure the latter captively to the sealing support.
