Abstract (en)
[origin: US2008073857A1] A sealing system, in particular for sealing multi-part exhaust gas pipes for an internal combustion engine, with at least a first flange part (9) and a second flange part (11) that guide a heat flow (5) and that border between them a receiving space (33) for at least one sealing element (29, 31), is characterized in that the flange parts (9, 11) that are adjacent to one another in each case form a ring flange (13) that extends outward, facing away from the heat flow (5) and running transversely to the latter, in which the faces (15, 17) of the flange parts (9, 11) that are adjacent to one another form a chamber to some extent of the receiving space (33) of the sealing element (29, 31).
