Abstract (en)
[origin: WO2008028649A2] The invention relates to an information system having a memory device which stores the following elements: terms (1, 1'), names (2, 2'), where each term (1, 1') is assigned at least one name (2, 2'), and validity ranges (5, 5') which are each defined by a term (1, 1'), where at least one name (2') is assigned to one or more validity ranges (5), and having a display device for displaying elements which are stored in the memory device, wherein a term (1') is assigned to one or more validity ranges (5) using a name (2'), which is assigned to said term, and defines a validity range (5') and/or at least one validity range (5') is additionally further defined by a validity range (5) which is defined by a term (1), and to a method for displaying information, said method having the following steps of: setting up a data structure in the form of a semantic system containing terms, assigning names to the terms, where each term is assigned at least one name, defining validity ranges using a respective term, and assigning at least one name to one or more validity ranges, wherein at least one term is assigned to one or more validity ranges using a name which is assigned to said term, and a validity range is defined by this term and/or at least one validity range is additionally further defined by at least one validity range which is defined by a term.
