Abstract (en)

[origin: WO2008037228A1] The invention relates to a fuse switch disconnecter with a lower part and an upper part, which is arranged moveably on the lower part and, functioning as a switching lever, in the closed switching state of the fuse switch disconnecter at least partially covers the lower part and a recessed handle; and a locking eyelet, which is arranged on the lower part and which is used for receiving a locking device wherein the upper part has a cutout for passing through the locking eyelet. The invention provides that the locking eyelet (4) is arranged in that region of the lower part (1) which is overlapped by the recessed handle (3).
