Abstract (en)

[origin: WO2008037323A1] The invention relates to a lamp operating device (10) for operating one or multiple light sources (20-1, 20-2), with a first interface unit (15) for connecting the lamp operating device (10) to a control line (2) and for receiving external control commands corresponding to a first communications protocol, and with a control unit (11) which operates the light source(s) (20-1, 20-2) in accordance with the control commands received via the first interface unit (15). A second interface unit (17) is provided for receiving programming information according to a second communications protocol, wherein the conversion of the control commands received via the first interface unit (15) for operating the light source(s) (20-1, 20-2) is performed by the control unit (11), at least partially taking into account the programming information.
